

OTL SERIES

On-The-Level High To Low & Low To High Impedance Matchers

The OTL Series line matching modules are designed to match consumer grade high impedance audio electronic sources to low level professional audio equipment. Two models are available: Hi-Z to Low-Z conversion & Low-Z to Hi-Z Conversion.

Using an OTL Series module is simple. Just plug it in-line with the signal using the proper cables. It is not necessary for the user to make any adjustments. OTL Series modules suffer no loss of signal and actually provide gain, which is easily compensated for by the destination equipment, such as mixers, Non-Linear Edit Systems or other related equipment.

OTL-1S Connectors: 2 XLR Male and 2 Female RCAs

OTL-2S Connectors: 2 XLR Female and 2 Female RCAs
